The Plains

Peasants nowadays live in the plains more willingly than they do in the mountains. Good level land has a scarcity value. The most thorough study of this has been made by A. G. Ogilvie, who prepared a map of population density in Greece for the *Geographical Journal* of May–June 1945. He has identified fifty-nine districts which he regards as plains. These usually contain the regional and local capitals and are widely scattered among and around mountains, including in most cases the slopes facing them. They take up about 30 percent of the mainland, but contain about 52 percent of the nonurban population. Thus, one half of the rural population lives upon plains comprising less than one third of the mainland; but this also means that the remaining one half of the rural population lives in a completely mountainous environment.

In Greece the largest plain — that of Trikkala-Karditsa in Thessaly — is less than five hundred square miles in size, not much larger than many American counties. The roll call of the plains, which are alluvial, would list the major provincial towns, whose location is in part an answer to the need for marketing and transportation services of the villagers located in the surrounding fertile agricultural areas. Whether I was traveling in the Peloponnesos, in Epirus, or elsewhere, it was always a stirring sight to climb some range and find spread out on the other side a fruitful valley, along a river or in some old lake basin whose water drained off long ago.

When Greeks think of the plains, however, they think of the kind around Larissa, the chief city of Thessaly, which has rapidly become the center of mechanized agriculture, or they think of the plain of Thessalonike in Macedonia. These are the most important breadbaskets of Greece. Familiarity with these plains means also familiarity with the sun of Greece, which beats down mercilessly in the summertime. Here, a clump of trees or even a single tree is an oasis of shade for a rest after hours of working the sun-baked fields. Where there is not even one tree, the peasants rig up tentlike shelters for use at noonday or take refuge beneath a battered umbrella. During the agricultural season the plains literally teem with people — seldom are they ever out of sight or sound; but they do become more tired and listless as the day wears on. The peasant men in straw hats become tanned to the color of dark leather, as do many of the women in spite of their free-flowing headkerchiefs. The sun, nevertheless, works wonders with the crops, ripening the grain and bringing sweetness to the magnificent fruits of Greece.

If the plains make one conscious of the sun, they make one even more conscious of water — so much so that a tepid drink from a donkey-borne cask has a refreshing tang to it. On the plains there is usually too much
